

# AGRIHELP

An agricultural-technology based website typically focuses on providing information, resources, and services related to agriculture and farming. Such a website can cater to various audiences, including farmers, agricultural professionals, and individuals interested in learning about sustainable farming practices. Here are some key aspects and features that an agricultural-based website might include. Our Webapp is available in multilanguage to help the farmers understand easily.

1.WEATHER- The weather feature would provide localized and accurate weather information based on the user's location or the selected region. It can include real-time data on temperature, precipitation, wind speed and direction, humidity etc.

2.SHOP – This feature helps the farmer or other individual to buy the products related to agriculture from the genuine sites and without any difficulty.

3.GOVERNMENT SCHEME – every year government introduces many schemes and loan facility to help the farmers financially and encourage them towards farming but due to lack of information most of the farmers didn't come to know about these schemes and fails to get benefited as a solution this feature will show the latest schemes by the government and to make them benefited.

4.RESOURCE – this feature include the genuine sites where the farmers can easily buy there essential things and overcome any type of difficulty faced by them.

5.PEST INFORMATION - Pests can cause significant damage to crops, and early detection and control are critical for the success of any farming operation. AGRIHELP provides farmers with information on common pests and their control measures, helping them to protect their crops from damage.

6.CROP RECOMMENDATION - The Crop Recommendation feature on an agricultural website is a valuable tool that helps farmers make informed decisions about which crops to grow on their farms. This feature typically utilizes various factors such as soil type, climate conditions, geographical location, and market demand to suggest suitable crop options. It's important to note that while the Crop Recommendation feature can be a useful tool, it should be considered as a suggestion rather than an absolute decision-maker.

7.BUY & SELL – This feature connects the buyer and seller to communicate and do their business from authorized manner and with an ease . in this feature we create the link between buyer and seller.

8.CHAT ROOM – it creates a environment where the like minded people of their mutual state meet and communicate with each other and to solve their problem and joins a same like environment.
